# Jetcol High Speed

Jetcol High Speed is designed to combine an exceptional high transfer yield with high speed absorption and high speed drying.

Properties

- high speed drying time
- excellent transfer yield
- high rub resistance of printed image
- high quality contour
- excellent detail printing
- superb uniformity
- available in wide variety of standard roll widths
- available in jumbo roll length
- substance 95 g/m²

Jetcol HTR

Jetcol HTR 2000 is the standard base paper for digital sublimation transfer printing transfer. This paper is specifically designed for inkjet printing with disperse dyestuffs.

Properties
- unsurpassed transfer yield
- good printed paper shelf life
- excellent contour and fine detail printing
- superb evenness
- designed for both piezo and bubble jet printing
- substance 70 g/m^2

Jetcol HTR 4000 is designed for high coverage applications. With this sublimation transfer paper you will be able to print and transfer very deep colors with a maximum transfer yield.

Properties
- unsurpassed transfer yield
- stays completely flat during printing
- enables printing of very deep colors
- enhanced drying
- excellent detail printing
- superb evenness
- designed for both piezo and bubble jet printing
- substance 140 g/m^2

Jetcol HTR 5000 is designed for application in small desktop printers. This is our standard paper for sheet printing.

Properties
- unsurpassed transfer yield
- very stable paper for easy handling
- non-printable side is marked
- enhanced drying
- excellent detail printing
- superb evenness
- designed for both piezo and bubble jet printing
- substance 140 g/m^2
